

Spatial saturation analysis — Per-station saturation curves (BC QDM)
= station saturation point | Dashed line = regional N* | Period: 1981–2014

(b) Kling–Gupta Efficiency (KGE) — Spatial Saturation
Each line = one station | = station saturation point
Bold line = regional mean

(c) Saturation Point (N*) per Station and Metric
Number in cell = ensemble size at saturation
Darker = larger N* (later saturation)

(a) RMSE (mm day⁻¹) — Spatial Saturation
Each line = one station | = station saturation point
Bold line = regional mean
