

Sen's Slope Comparison — Observed vs Raw CMIP6 vs QDM Bias-Corrected
Period: 1981–2014 | Error bars = 95% CI | Ref: Sen (1968) | Hamed & Rao (1998)

(a) Sen's Slope per Station
Bars = 95% CI | *** $p < 0.001$ ** $p < 0.01$ * $p < 0.05$

(b) Trend Preservation Assessment
Simulated vs Observed Sen's Slope
Closer to 1:1 line = better preservation

(c) Relative Rainfall Change
 $= (\text{Slope} \times N_{\text{years}}) / \text{Mean} \times 100\%$
