

MME added value assessment — Marginal contribution, win rate, scatter, and multi-metric radar
Bias-Corrected (QDM) ensemble vs individual models | Period: 1981–2014

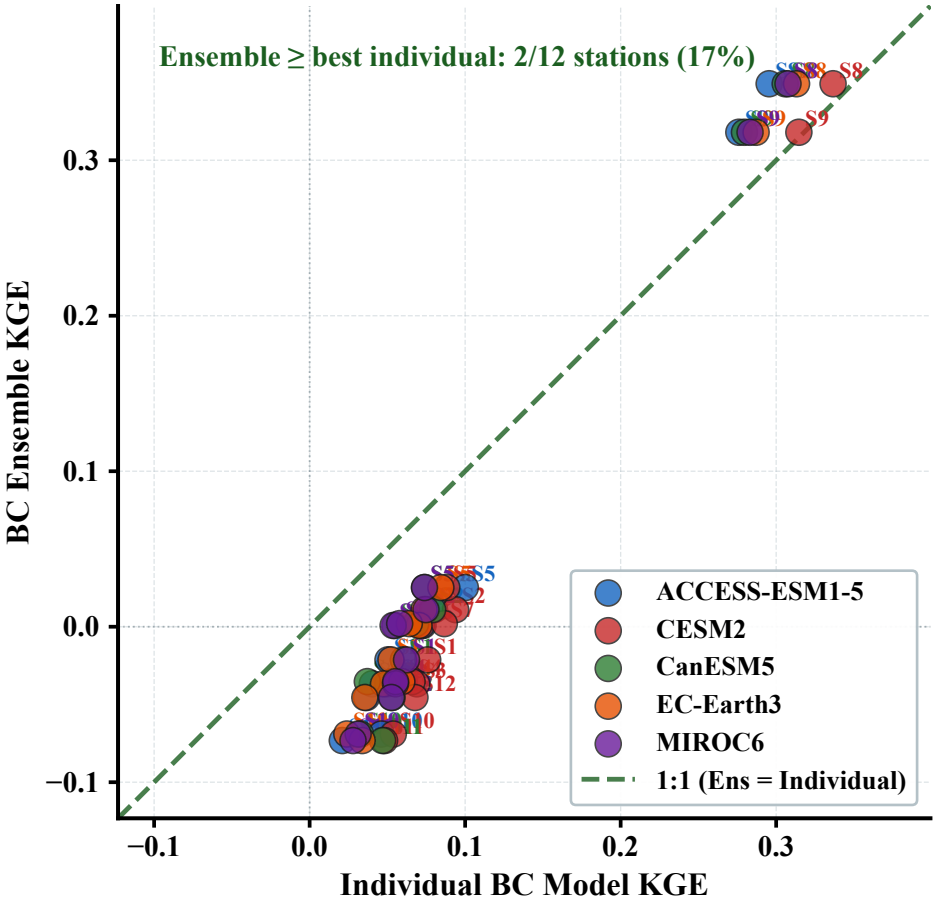

(a) Marginal Contribution — Leave-One-Out RMSE
RMSE increase when model excluded from ensemble

(b) Ensemble vs Individual — Win Rate
% stations where BC ensemble outperforms each individual model

(c) Individual BC Model vs BC Ensemble — Station KGE
Points above 1:1 = ensemble better | Colours = models

(d) Normalised Multi-Metric Radar
BC Ensemble vs Individual BC Models
